Technical Bulletin No. 330

SECURITY DEFINITIONS FOR NJE NODES

Issued Date: December 15, 2003
Effective Date: January 12, 2004
Section/Group: Security
Submitted By: Bart Grant
Approved By: Michael Allred

The State of Utah's mainframe systems currently accept job submissions from external NJE NODES. These jobs are allowed to execute based on an authorized Userid and Password in their job cards. Under this scenario, the actual SUBMITTER of the job is unknown to our RACF security system.

In order for ITS to implement JESJOBS security (the ability to secure job submission based on JOB NAME and SUBMITTER) *and* to improve security by removing passwords from these job cards, ITS will implement security for all jobs originating from external NJE NODES.

As of the effective date all jobs originating from external NJEs will be required to have local security definitions (RACF NODES profiles) containing the following information:

- External NJE node (where the job originates from).
- Name of the company or organization hosting the NJE node.
- External USERID that submits the job on the remote system.
- Contact person at the external location (owner of the external Userid).
- Phone number for the contact person at the external location.
- DEFAULT GROUP of the external Userid (can be provided by your RACF administrator).

As with all security requests, this information should be forwarded to ITS Security through authorized agency security administrators.

Questions about this bulletin can be emailed to dsecurity@utah.gov.
